LICZBA PI
(2018)

SATB choir
and soprano
tenor solo

INSTRUCTIONS TO THE PLAYERS

Where the word **Pi** is sustained over multiple pitches, I have written out the diphthong as **pa-ee** to specify where the two syllables are sung on different pitches. I also use **pa** and **ee** as separate syllables throughout the piece.

The main text is in English with the exception of the Polish word **liczba** (pronounced **lidch-bah**) and the occasional use of Italian.

Because short sections of the Pi sequence are sung throughout the piece, it might help the singers to know that the individual digits are assigned fixed pitches, as follows:

The digit *zero* is assigned a rest. The sequence shown above, sung in order, also makes up the Pi motive. The motive recurs in the piece and also ends it.

Duration: 5'30" (but could stretch to infinity depending on the ad lib. choice at the end).

COMPOSER'S NOTE

LICZBA PI (Number Pi) is inspired by a poem by Nobel-winning Polish poet Wistawa Szymborska. Defined millennia ago as the ratio of the circumference of a circle to its diameter, Pi was important for very practical reasons. First and foremost, to compute the circumference and area of a circle from its diameter - task that, if one tries without knowing the value of Pi, is not easy. Pi turned out to be an irrational number; its value stretches to infinity, in a never-ending sequence of digits that starts with 3.141592653589793238462643383279502884197169399375105820974944 and then on, and on, and on. Szymborska writes an ode to Pi's infinity. Everything is limited: our shirt size, the length of a serpent, a ray of light from a star, a phone number. But not Pi; it stretches on, tickling eternity.

Three point!

*one four one five nine two six five three five eight nine
seven nine three two*

Pi wonderous Pi

three eight four six two six four three

All the digits a start

three eight three two two six four three

it never ends

Pi Pi Pi

It can't be held

seven nine five (zero)

with a glance

two eight eight four

calculation

imagination

nothing here compares

nothing absolutely nothing

anything in the world.

The longest snake maybe is thirty feet

and then it stops

Same for the snakes that are in fairy tales

although they last a little longer.

But instead Pi the mighty number

it does not stop at the edge of the page

it runs off the table in the air

the wall, the leaf, the nest, the clouds, into the

sky: Oh mighty mighty Pi

It's like the tail of a mouse, the comet tail.

The ray of the star it bends, so weak.

Yes here, my phone number (five six three one

four two)

your shirt size, and the year (mille nove cento sei)

floor six, people on earth (billions), hip size.

A charade, a codex

dove vola e canta l'usignol*

a charade

please remain calm

a codex

i cieli, la terra passeran**

But not!

one nine seven one six nine three nine

Liczba Pi

nine three seven five one (zero) five eight

two (zero) nine seven

Does not!

There it is with its passable *four*,

pretty good *nine*,

and we love another *four*,

stimolando, oh, eternitá ***

Pi Pi Pi Pi Pi Pi Pi Pi Pi Pi Pi Pi Pi Pi Pi Pi ...

* where the nightingale flies and sings; ** heaven and earth will disappear; *** tickling, oh, eternity
